

Connected for the Future.

Supplier Relationship Management.

PRISMA (via PWS). Factsheet.

Brief description.

PRISMA administers CA models of components or production resources. The basic goal of PRISMA is to create and save the CA original. PRISMA ensures the consistency of databases in the systems of the technical and administrative worlds.

Possible applications.

PRISMA is a development of the BMW Group. PRISMA is used in the BMW Group and with partners.

CA models are used in:

- Design and development (e.g. vehicle/ engine projects, electric/ electronic projects),
- Production (e.g. control of machine tools and robots)

External target group are cooperation partners and engineering and development partners.

Features.

- Supplies all operational units with up-to-date and consistent CA data.
- Information system for geometric data.
- Access, identification and administration of documents using administrative data and their relationships.
- Linked with CA operational systems.
- Administration of the CA product data.
- Transfer of documents between connected computers and CA systems.
- Role-based, degree-of-implementation-based and dendrogram-based authorisation concept,
- Worldwide data access for registered users.

Requirements.

The prerequisite to use PRISMA is access to PDM Web Client and respective roles and rights within PRISMA database.

To use PWS external partners need a QX-Number.

Registration.

See also at “About applications” for PDM Web Client.

For external partners via the Partner Portal:
The PDM Web Client can be requested for partners via their master administrator in the user management of the Partner Portal.

The rights for PRISMA itself are given by the individual contact of the BMW Group responsible for the specific project.

Registration for employees of the BMW Group:
Employees of the BMW Group contact the PRISMA Hotline regarding rights for PRISMA.
