Technology Assembly

Team Virtual Assembly, Team Layout Assembly

CA-De cumer ation Green 2007

Basic Regulations

- The CA-Documentation-Guideline is valid for all production equipment procured by the Technology Assembly and controls which CAD-System has to be used by the supplier for the design process and documentation.
- The workflow and data characteristics are specified in the appropriate guidelines (Catia V5: OEM-Guideline for the Jig Design with Catia V5 and Guide to Design of production tooling; MicroStation: Delivery Instructions CAD-Layoutplanning for Technology Assembly).
- The guidelines are provided in the BMW Partner Portal: https://b2b.bmw.com -> public area -> Departments -> Technologies -> Assembly
- For topics marked 'AS' in the following table, the 3D geometry has to be delivered as alternative shape without drawing and without BOM. For Catia V5, the geometry has to be provided as cgr or All.CATPart. For MicroStation, the geometry has to be provided as simplified representation for the layout according to the Delivery Instructions CAD-Layoutplanning for Technology Assembly in dgn file format.
- The Team Virtual Assembly is responsible for questions concerning Catia V5 topics. The Team Layout Assembly is responsible for questions relating to MicroStation v8 layouts. The team members are listed in BMW Partner Portal.

The Team Fastening Technology is responsible for the homologation and CAD supply regarding assembly tools for screws and nuts.

| | Catia V5 (3D, | Layout 3D | Layout 2D |] |
|---|---------------|--------------|--------------|---|
| Tania | 2D and BOM) | MicroStation | MicroStation | Commont |
| Topic | | v8 (dgn) | v8 (dgn) | Comment |
| workshop facilities | | | | standard factoring tools with homologation (LICD) |
| fastening tools (pneumatic or battery), hand tools (standard, not custom-made) | AS | | | standard fastening tools with homologation (HSD), catalogue products |
| hand tools (custom-made products) | Х | | | |
| assembly rigs, measuring and test equipment | Х | | Х | |
| torque reaction arms and fixture devices for EC assembly tools | х | | | including EC assembly tool as alternative shape |
| handling equipment, manipulator | х | | | |
| assembly gauges, equipment gauges | х | AS | Х | layout relevant, if required space >= 5 sqm |
| robot | AS | AS | Х | 2D layout with illustration of operating area |
| robot tooling | х | AS | Х | |
| conveyor equipment | ' | | ' | |
| assembly adapter (crossbar, car adapter, etc.) | х | | | |
| hangers (e.g. for tilt assembly, heavy duty conveyor, etc.) | х | AS | х | |
| carriers | х | AS | х | |
| load handling equipment, workpieace holder, etc. | х | AS | Х | |
| conveyors | ' | | | |
| overhead conveyor | | Х | х | TriCAD FT for early planning phase and accordingly for documentation if TriCAD FT |
| | | ^ | ^ | corresponds to built hardware; structural steelwork in TriCAD BT |
| floor conveyor | | Х | Х | TriCAD FT for early planning phase and accordingly for documentation if TriCAD FT corresponds to built hardware |
| roll, belt or chain conveyors (e.g. dual strand conveyors) | | X | Х | TriCAD FT for early planning phase and accordingly for documentation if TriCAD FT corresponds to built hardware |
| slat conveyor, associates carrier | | Х | х | TriCAD FT for early planning phase and accordingly for documentation if TriCAD FT corresponds to built hardware |
| AGV | | Х | х | TriCAD FT for early planning phase and accordingly for documentation if TriCAD FT corresponds to built hardware |
